Shawn,

We wanted to get started with the knowledge transfer sessions on USA.gov. We are planning to have

our first overview session tomorrow and then some detailed sessions later in the week depending on CTAC.

Can Dan join tomorrows session? Also, when can he be available for the ECAS project? Let us know.

Thanks,

(b) (6)

Hi Gerard/Henry/Sherry

We have below questions on the ECAS platform, which help us in coming up with the Transition Approach/Plan and timelines.

Q1 - In the current ECAS AWS environment operating under CTAC, are the AWS organizations enabled?

Q1.1 - If Organizations are enabled, we will need to work with CTAC team on transition their master-pair account, can GSA confirm with CTAC on their concurrence on doing this?

Q1.2 - If Organization are enabled, the process will be easier and we still need confirmation from CTAC on transferring the AWS account, can GSA confirm with CTAC on their concurrence on doing this?

Q2 - I am hoping that contractually GSA owns all the ECAS components and CTAC team will be required transfer as part of the transition-out plan. Could GSA confirm this with CTAC team ASAP?, which will help in detailing out our Plan A, Plan B etc

Q3 - We would like to reach out to CTAC resales team through GSA AWS rep on establishing a CTA, this process will be needed to transfer the accounts either way. Could you please confirm if we can proceed on this step, we would like to ensure you don't have any concerns on this.

Q4 - Outside of the AWS inventory shared as part of the RFQ (attached to this email too), could we get access to the Architecture of current ECAS environment, how the different apps are configured, any other third party tools/licenses that are used (if they are GSA owned vs CTAC owned)

Q5 - Would it be possible to schedule an initial call with CTAC team on Friday 11/22, it will be easier to get these questions answered in a call.

(b) (6) - Please email if you have any other additional questions or updates on the above questions.

Regards
Kishore

Adding to Kishore's list per his direction.

What operational practices are required to maintain the ATO?

What operational practices are currently employed to maintain the operating infrastructure and the applications which rely on it?

What is the system inventory of the current AWS implementation of ECAS - only [usa.gov](https://www.usa.gov), [gsa.gov](https://www.gsa.gov), [insight.gsa.gov](https://www.insight.gsa.gov) and an atlassian suite?

Are there other applications or components currently operating under the ECAS vehicle beyond [usa.gov](https://www.usa.gov), [gsa.gov](https://www.gsa.gov), [insight.gsa.gov](https://www.insight.gsa.gov) and the atlassian suite?

Does the SSP contain a complete list of all hardware and software associated with all infrastructure and applications.

Is the SSP current and complete in its documentation of all system and application interdependencies and integration points?

Are the network diagrams, and supporting network and security statements in the SSP current with the operating conditions of ECAS?

Is there an inventory of key personnel, roles, responsibilities, skill sets and security requirements for these personnel?

Is there a complete list of software and licenses for software in use within ECAS?

Does the SSP completely describe all data storage and sharing requirements?

Do the current processes for configuration management encompass all relevant reviews and approvals required by GSA for system changes and updates?

Are there other support systems required for ECAS operations that are not within the AWS environment?

Is there a current risk registry which describes all current infrastructure and application risk for all components of ECAS?

Is there project history or other information that the REI team should be made aware of in order to successfully transition and develop the ECAS project?
